

Workshop on Long Baseline Neutrino Experiments:

“Concluding Talk”

Stephen Parke
Fermilab
March 7, 2006

- Approx. Fraction ν_e in ν_3 : $\sim \sin^2 \theta_{13}$
- Mass Hierarchy: $\text{sign } \delta m_{31}^2$
- CP Violation: $\sin \delta \neq 0$
- Is ν_τ or ν_μ the dominant component of ν_3 ?
 $(\sin^2 2\theta_{23} \neq 1)$ $\sin^2 \theta_{23} > or < \frac{1}{2}$

In Vacuum:

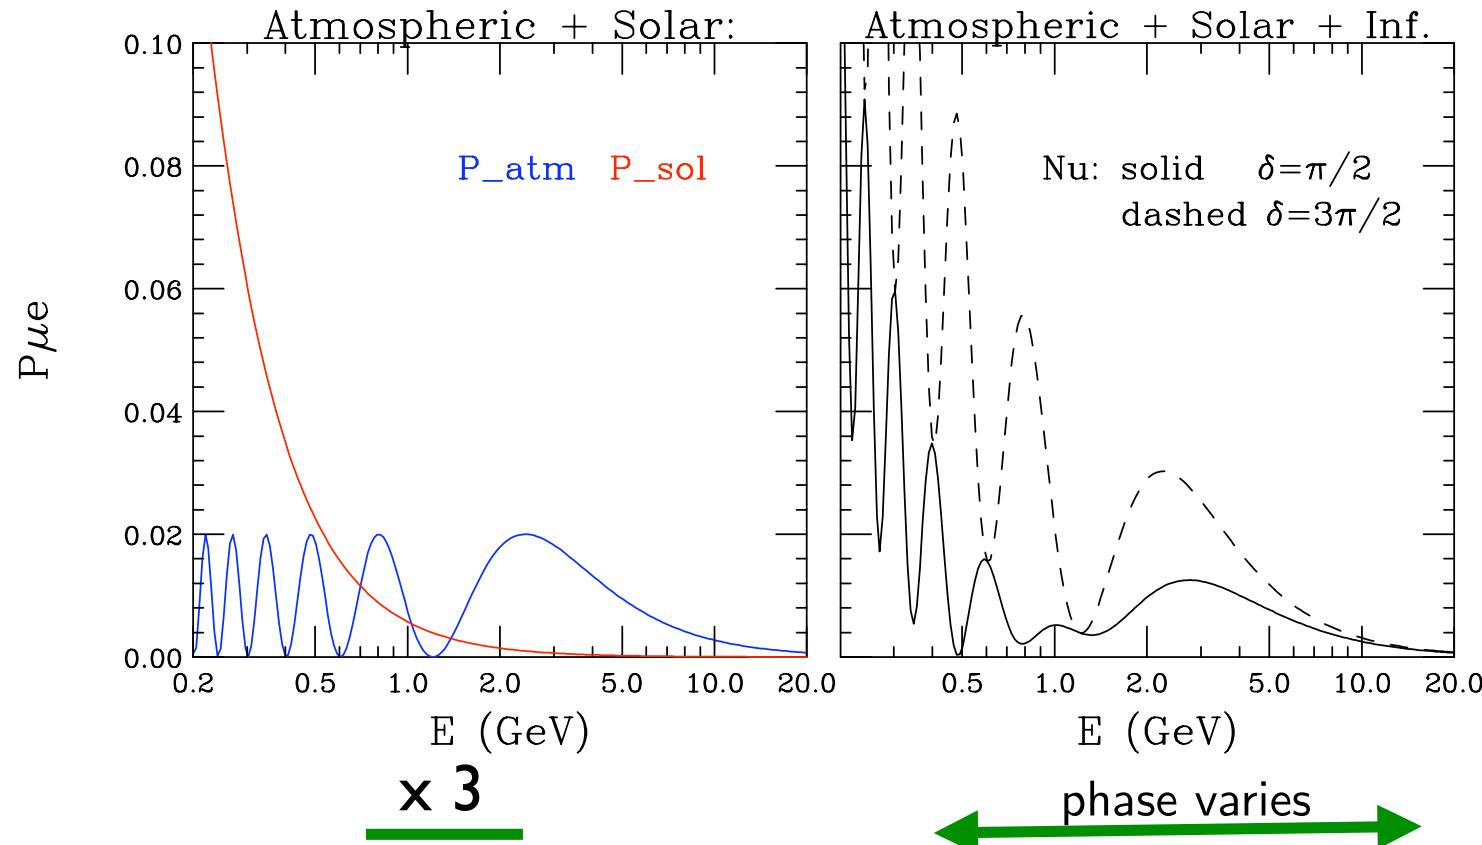

$$P(\nu_\mu \rightarrow \nu_e) \approx |\sqrt{P_{atm}} e^{-i(\Delta_{32} + \delta)} + \sqrt{P_{sol}}|^2$$

$$\sqrt{P_{atm}} = \sin \theta_{23} \sin 2\theta_{13} \sin \Delta_{31}$$

$$\sqrt{P_{sol}} = \cos \theta_{23} \sin 2\theta_{12} \sin \Delta_{21}$$

$$\Delta = \frac{|\delta m^2|L}{4\hbar c E} = 1.27 \frac{|\delta m^2|L}{4E}$$

For $L = 1200 \text{ km}$
and $\sin^2 2\theta_{13} = 0.04$

In Matter:

$$P(\nu_\mu \rightarrow \nu_e) \approx |\sqrt{P_{atm}} e^{-i(\Delta_{32} + \delta)} + \sqrt{P_{sol}}|^2$$

$$\sqrt{P_{atm}} = \sin \theta_{23} \sin 2\theta_{13} \frac{\sin(\Delta_{31} \mp aL)}{(\Delta_{31} \mp aL)} \Delta_{31}$$

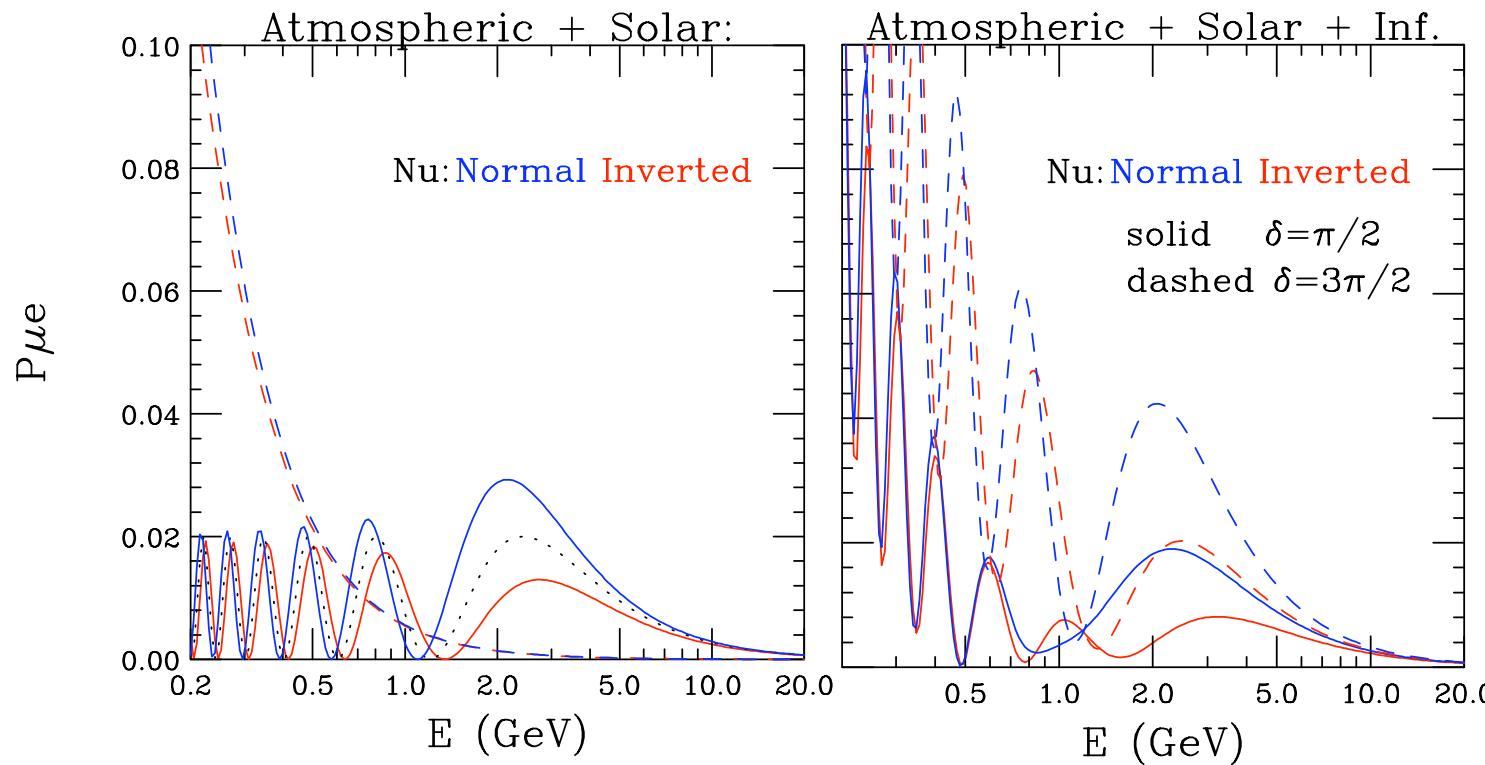

in vac: $\sin \Delta_{31}$

$$\sqrt{P_{sol}} = \cos \theta_{23} \sin 2\theta_{12} \frac{\sin(aL)}{(aL)} \Delta_{21}$$

in vac: $\sin \Delta_{21}$

For $L = 1200 \text{ km}$
and $\sin^2 2\theta_{13} = 0.04$

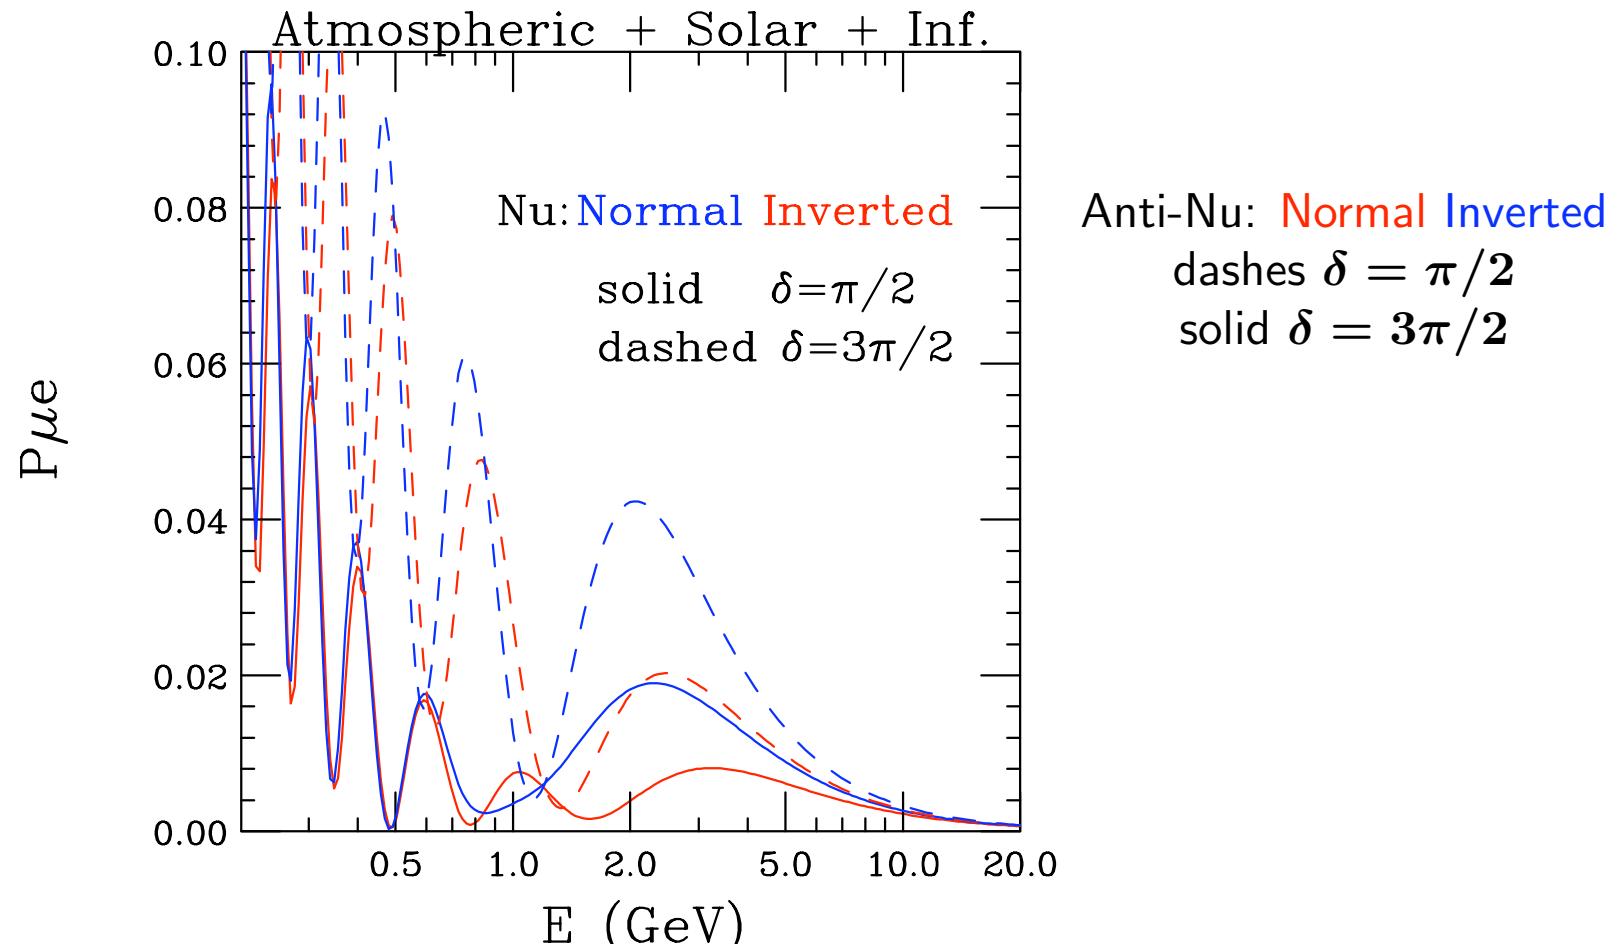

$$\pm = \text{sign}(\delta m_{31}^2), \quad a = G_F N_e / \sqrt{2} \approx (4000 \text{ km})^{-1}$$

$\bar{\nu}$

$a \rightarrow -a$ and $\delta \rightarrow -\delta$

$$P(\bar{\nu}, \delta m_{31}^2, \delta) = P(\nu, -\delta m_{31}^2, \delta + \pi)$$

Experimental Setups:

Off Axis

- Counting Exp: $(\nu, \bar{\nu})$

Off Axis (narrow band)

- near 1st Peak
- near 2nd Peak

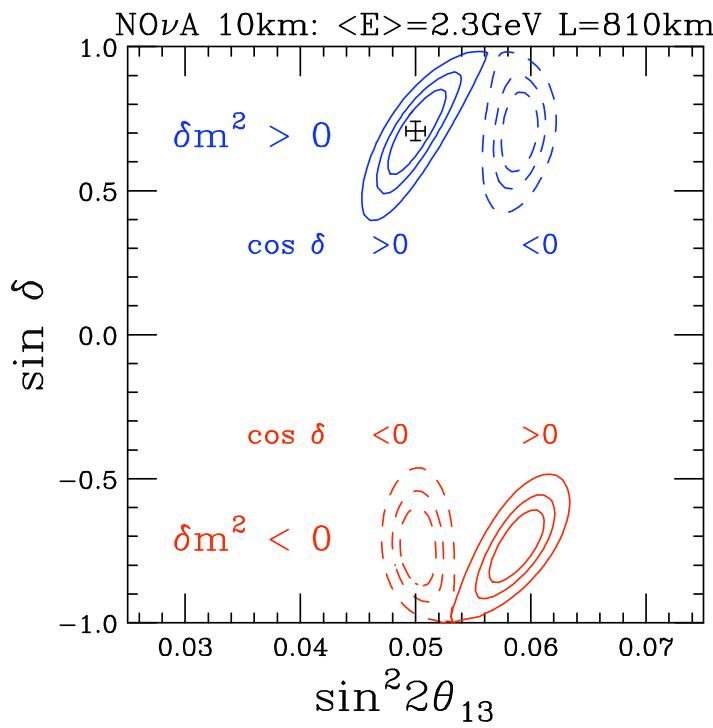

T2K, NOvA

- Spectrum Measurements: $(\nu, \bar{\nu})$

On (wide band) or Off Axis (narrow band)

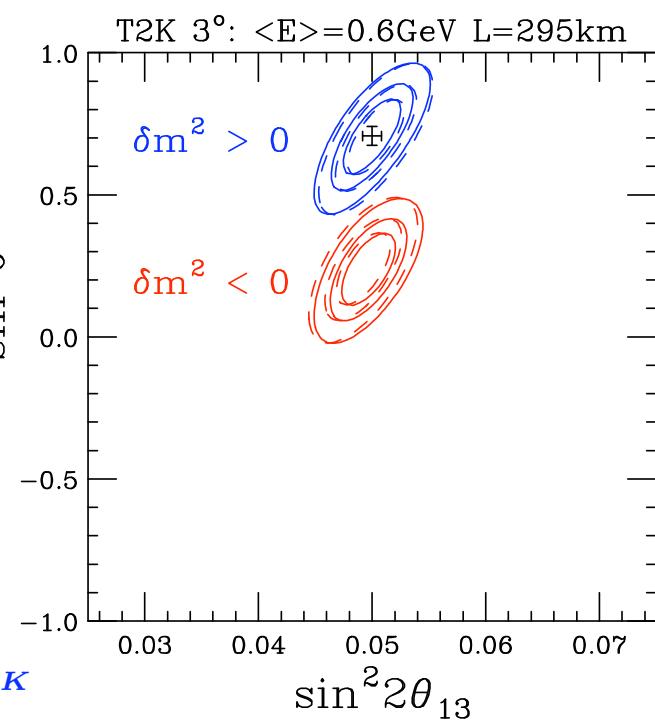

- around 1st Peak
- around 2nd Peak
- beyond

↑ ↓

1.4

$(\rho L)_{NO\nu A} = 3(\rho L)_{T2K}$

$$\langle \sin \delta \rangle_+ - \langle \sin \delta \rangle_-$$

$$\approx 1.4 \sqrt{\frac{\sin^2 2\theta_{13}}{0.05}}$$

$$\langle \sin \delta \rangle_+ - \langle \sin \delta \rangle_-$$

$$\approx 0.47 \sqrt{\frac{\sin^2 2\theta_{13}}{0.05}}$$

$$|\langle \sin \delta \rangle_{fake}^{T2K} - \langle \sin \delta \rangle_{fake}^{NO\nu A}| \approx 0.93 \sqrt{\frac{\sin^2 2\theta_{13}}{0.05}}$$

Experimental Setups:

- Counting Exp: $(\nu, \bar{\nu})$

Off Axis (narrow band)

- near 1st Peak
- near 2nd Peak

- Spectrum Measurements: $(\nu, \bar{\nu})$

On (wide band) or Off Axis (narrow band)

On Axis

BNL

- 
- around 1st Peak
 - around 2nd Peak
 - beyond

Why Broadband Beam?

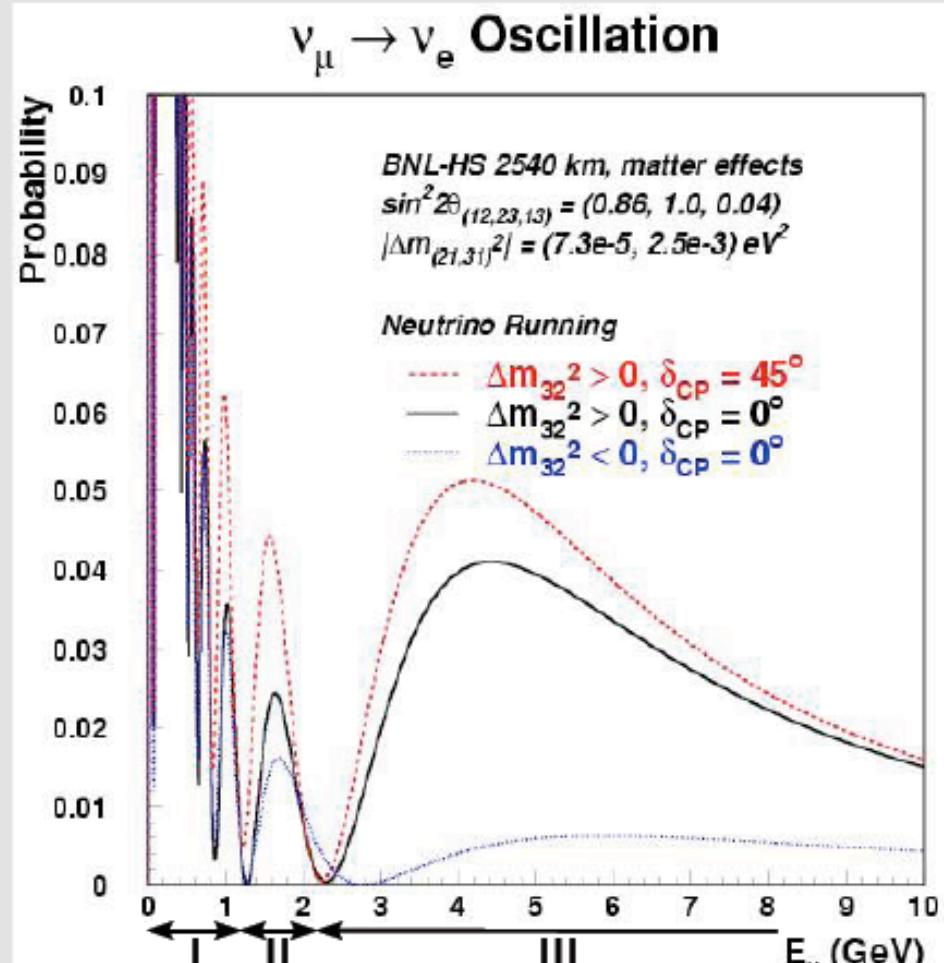

observe multiple nodes
extraction of oscillating
signal from background.

larger energies

larger cross sections
less running time for
anti-neutrinos

Sensitive to different
parameters in different
energy regions:

	I	II	III
$\sin^2 2\theta_{13}$	+	+	+
$\text{sign}(\Delta m^2_{32})$	0	0	++
δ_{CP}	+	++	+
solar	++	+	+

Experimental Setups:

- Counting Exp: $(\nu, \bar{\nu})$

Off Axis (narrow band)

- near 1st Peak
- near 2nd Peak

- Spectrum Measurements: $(\nu, \bar{\nu})$

On (wide band) or Off Axis (narrow band)

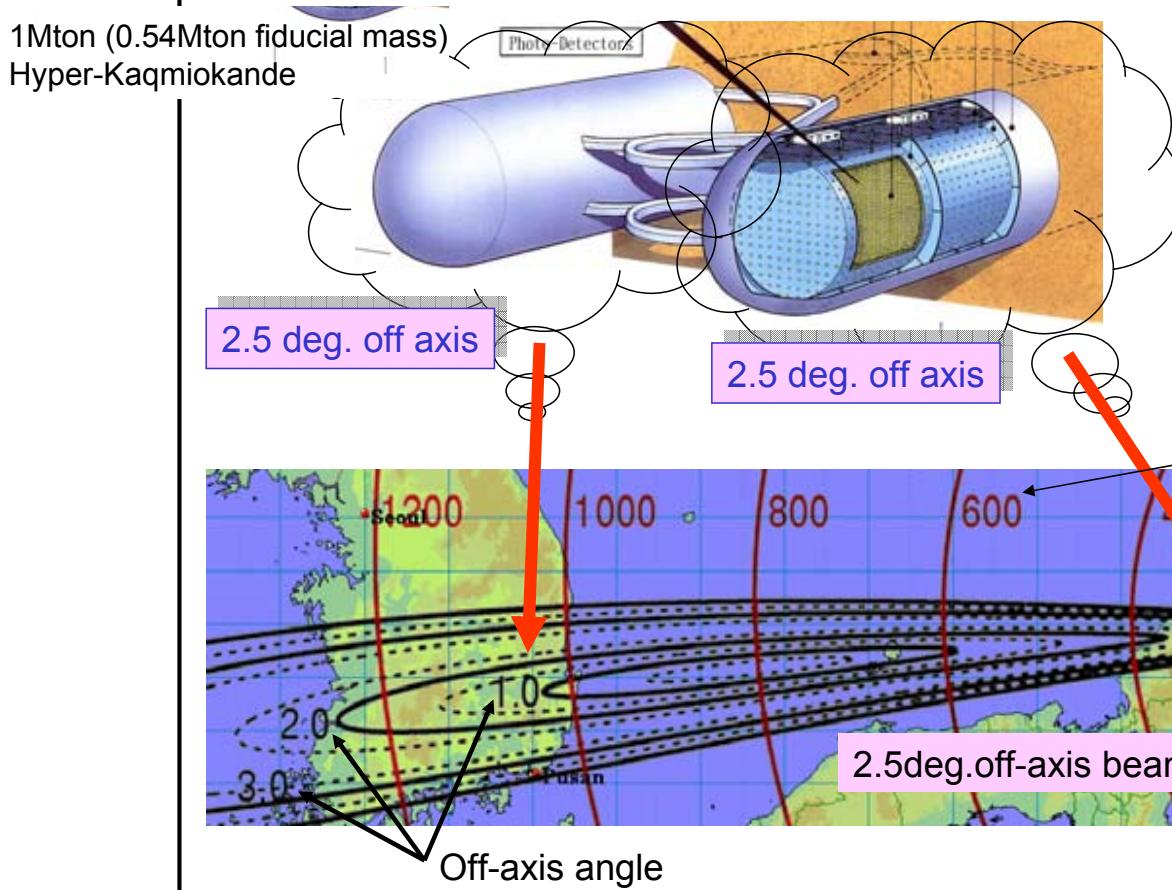

- around 1st Peak
- around 2nd Peak
- beyond

Off Axis

T2KK

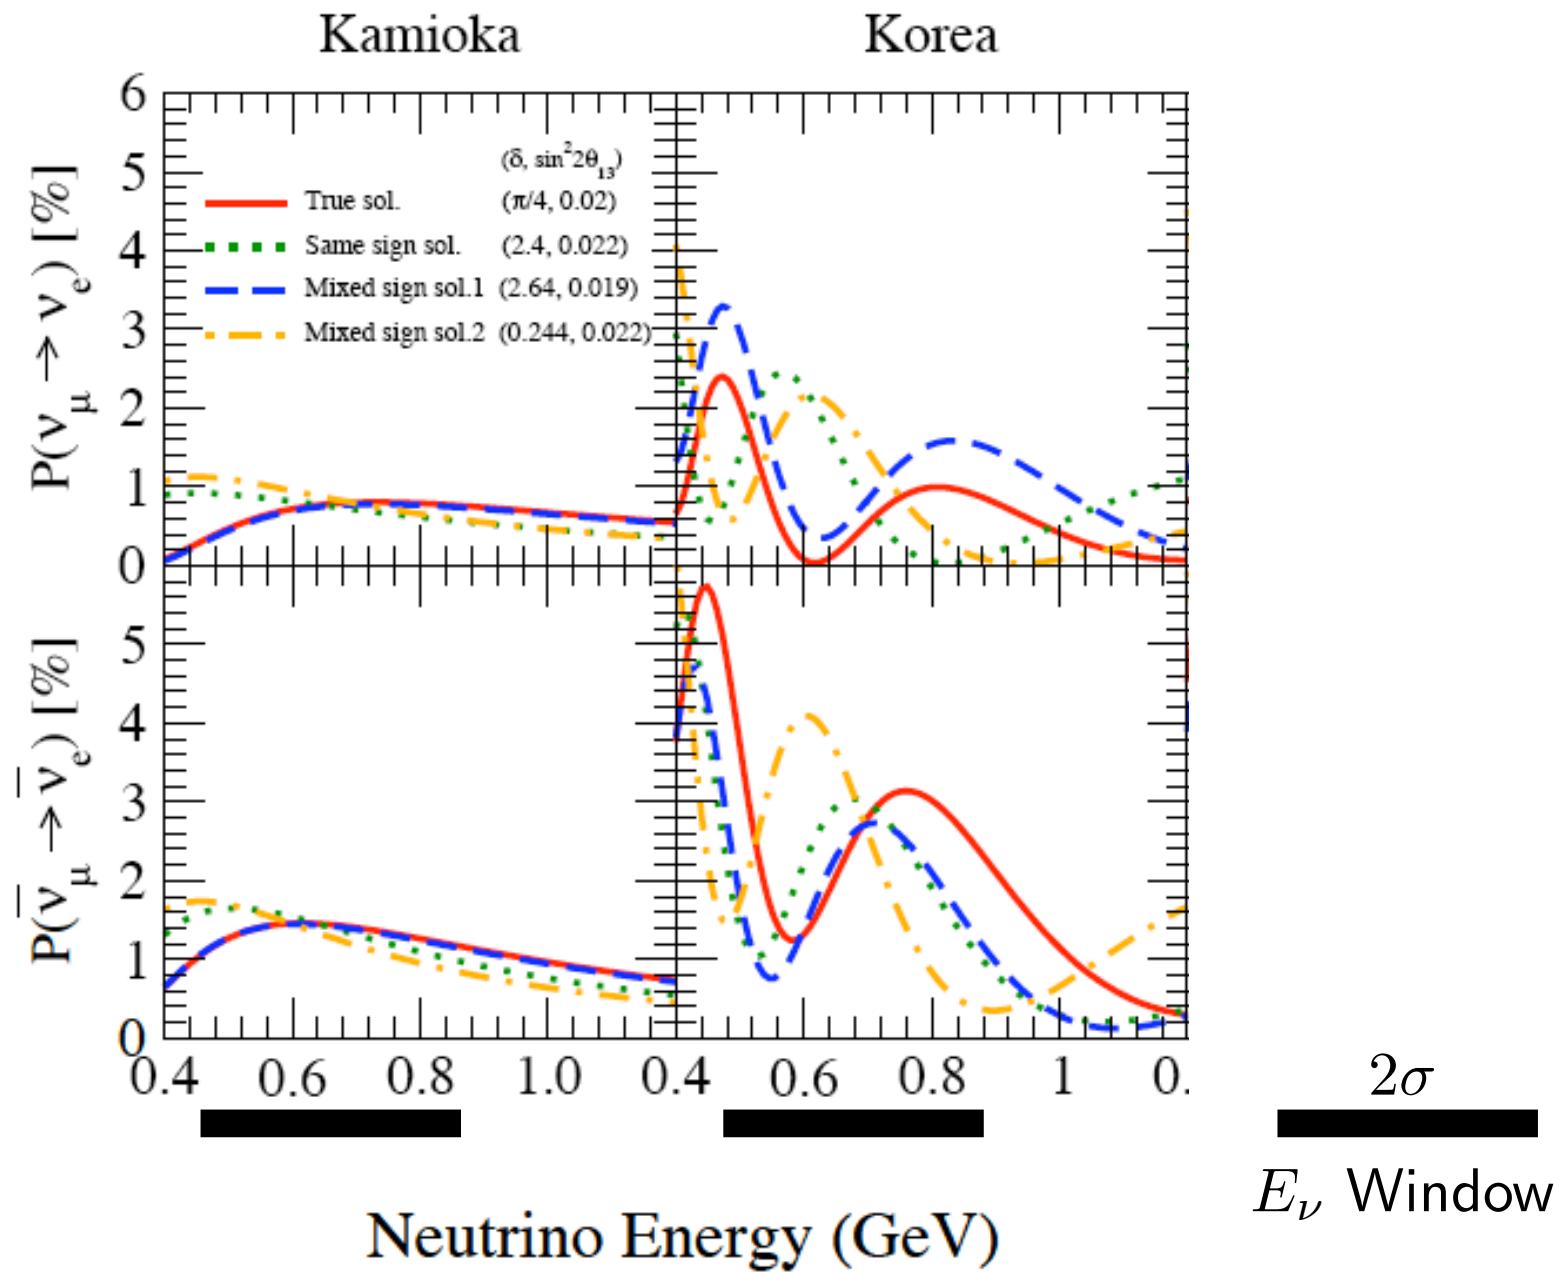

Off Axis:

Some recent progress: detector in Korea

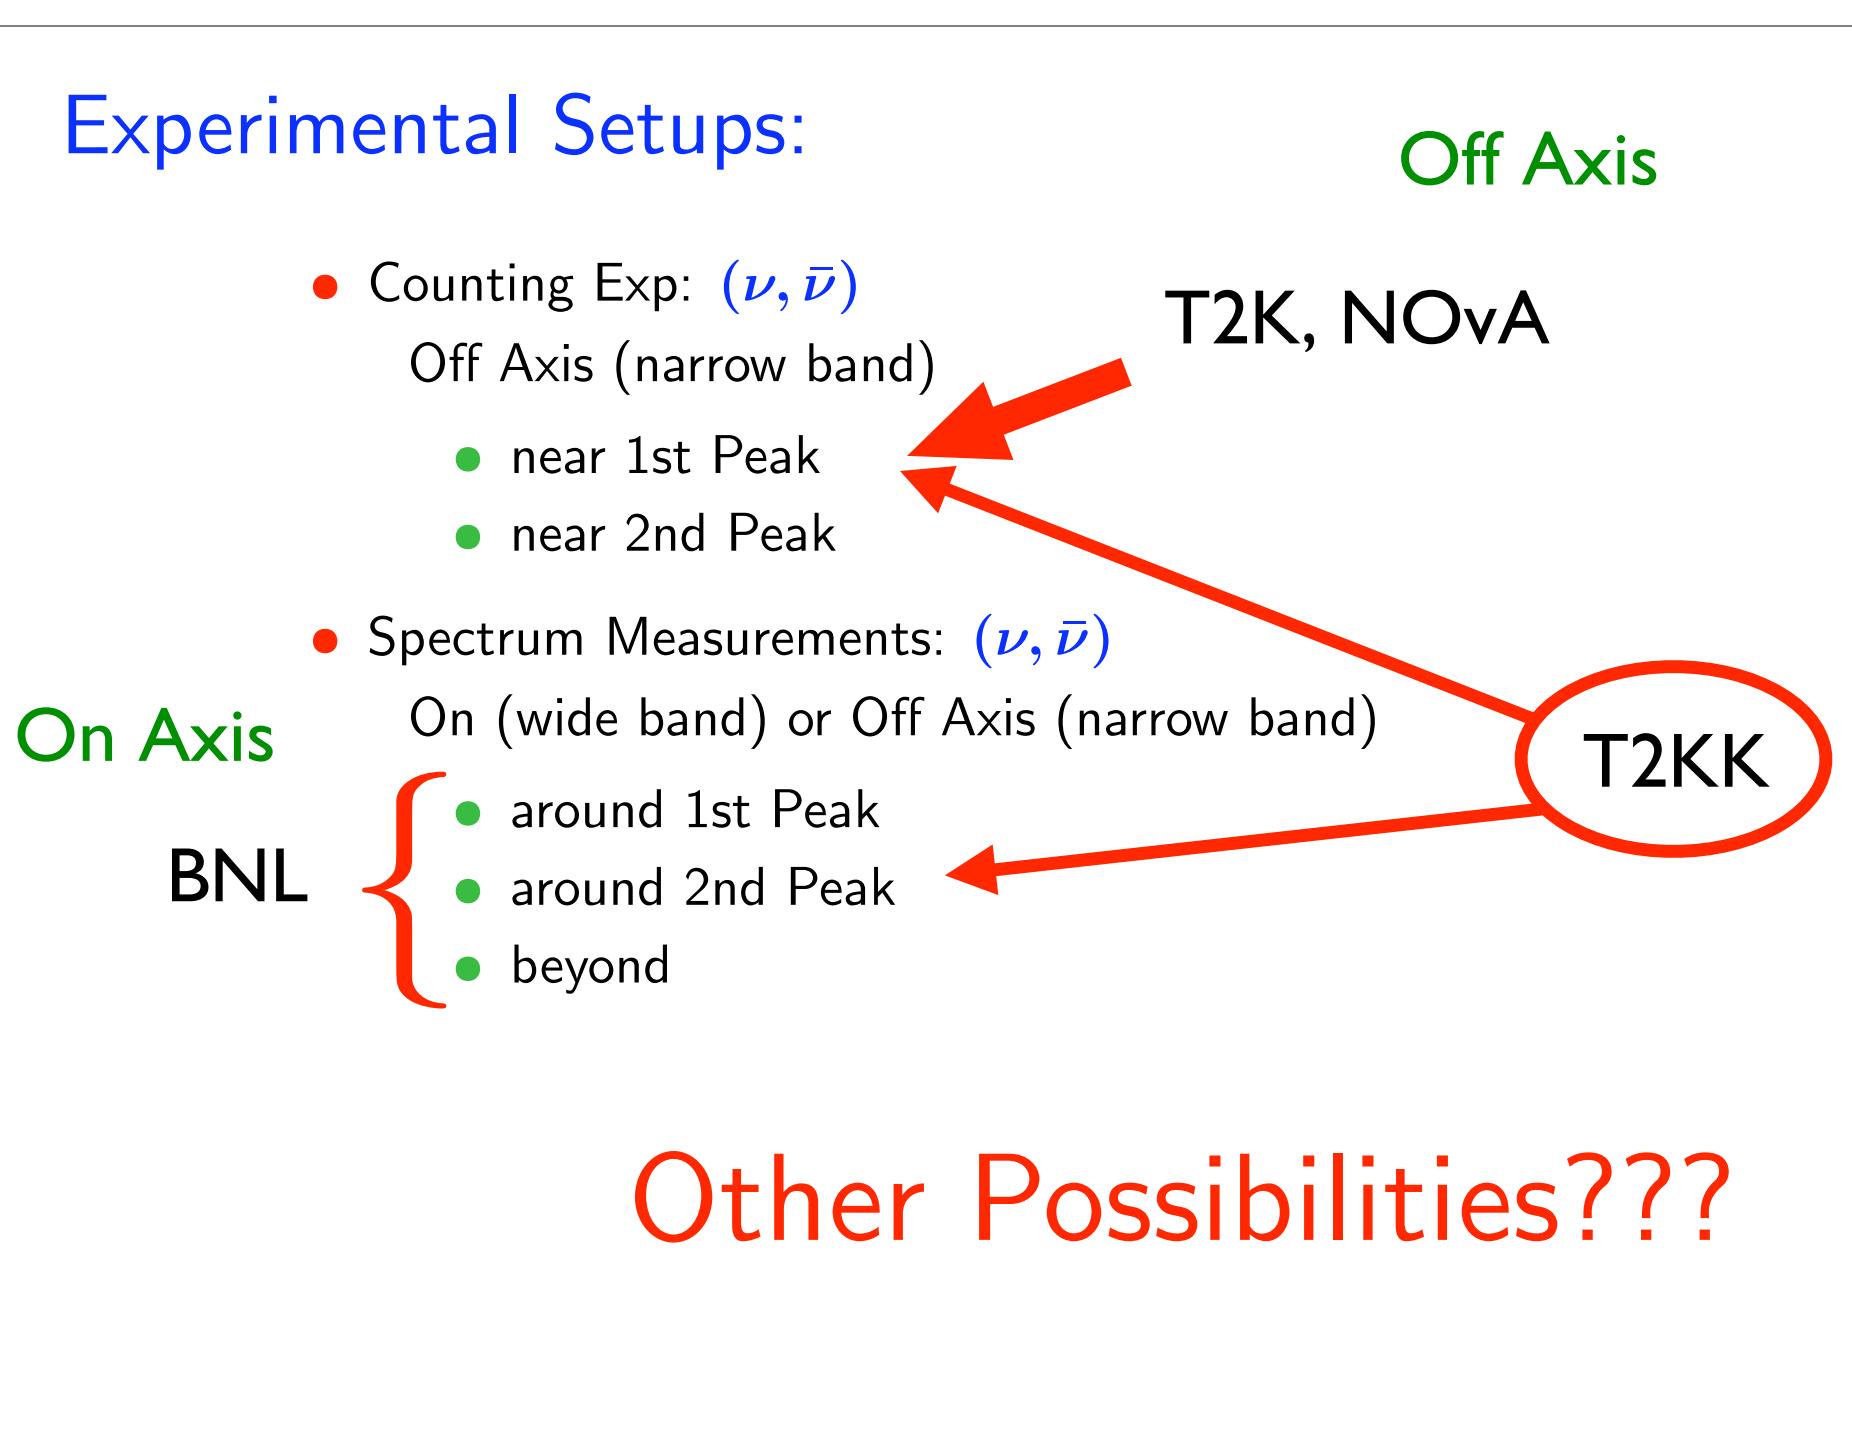

Total cost must
be similar to the
baseline design.

Ishitsuka, Kajita, Minakata and Nunokawa hep-ph/0504026

Experimental Setups:

Off Axis

T2K, NOvA

T2KK

Other Possibilities???

- New Neutrino Beams
 - β Beams
 - Neutrino Factory (muon decay)

“The” Thing Everybody can Agree on:

- Physics of $\nu_\mu \rightarrow \nu_e$ together with $\nu_\mu \rightarrow \nu_\mu$ is a Fantastic Laboratory for Lepton Flavor Physics!!!
 - Fraction ν_e in ν_3
 - ν Mass Hierarchy
 - Leptonic CP Violation
 - Is ν_τ or ν_μ the dominant component of ν_3 ?

Other Things Everybody can Agree on:

- Power of Neutrino Beam:
at least a 1 Mega-Watt proton source
- Size of Neutrino Detector:
fraction of Mega-Ton detector
- π^0 rejection:
EXCELLENT
- Physics Reach:
Be Capable of determining
 $\sin^2 2\theta_{13}$, $sign(\delta m_{31}^2)$, $\sin \delta$
pushing to $\sin^2 2\theta_{13} \Rightarrow 0.002$
($P_{atm} = P_{sol}$ @ 1st pk)
- Other Physics:
Proton Decay, Supernova, . . .

Less Agreement:

- Counting v Spectrum
- On Axis v Off Axis
- Location of Detector
- Detector Technology
- etc

DIVIDED,

we will be CONQUERED !!!

Neutrino Patterns:

- How is $\sin^2 \theta_{13}$ related $\frac{\delta m_{sol}^2}{\delta m_{atm}^2}$???

$$\frac{\delta m_{sol}^2}{\delta m_{atm}^2} = 0.03, \left(\frac{\delta m_{sol}^2}{\delta m_{atm}^2} \right)^2 = 0.001, \text{ etc}$$

- Is θ_{23} maximal ???

$$\sin^2 2\theta_{23} > 0.91 \Rightarrow 0.35 < \sin^2 \theta_{23} < 0.65 \text{ 90% CL}$$

$$\sin^2 2\theta_{23} > 0.99 \Rightarrow 0.45 < \sin^2 \theta_{23} < 0.55$$

- Is there a (broken maybe) permutation symmetry, $\nu_\mu \leftrightarrow \nu_\tau$???

Then $\sin^2 \theta_{13} \approx 0$ and $\sin^2 \theta_{23} \approx \frac{1}{2}$

- Quark-Lepton Complimentarity:

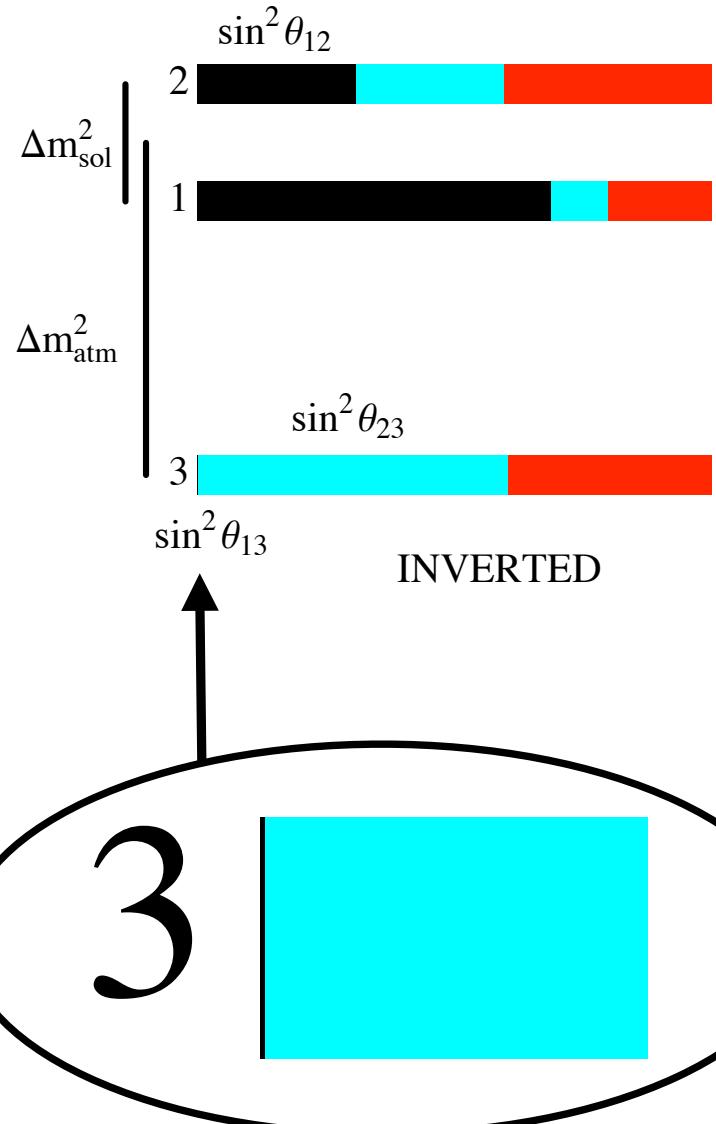

Lepton Mixing = Bi-maximal Mixing - Quark Mixing

$$\theta_{12} + \theta_{us} \approx \pi/4 ???$$

$$\theta_{23} + \theta_{cb} \approx \pi/4 ???$$

- Mass Hierarchy: Quark Like or Inverted (Quasi-degenerate)

pdg 2026:

$$\begin{aligned}\sin^2 \theta_{12} &\approx 0.31 \\ \sin^2 \theta_{13} &\approx 0.007 \\ \sin^2 \theta_{23} &\approx 0.60 \\ \delta &\approx 3\pi/4\end{aligned}$$

The Physics is **SURPRISES!!!** Compelling

- Fraction ν_e in ν_3
- ν Mass Hierarchy
- Leptonic CP Violation
- Is ν_τ or ν_μ the dominant component of ν_3 ?
